Materials Express is a peer-reviewed multidisciplinary journal reporting emerging research on materials science, engineering and biology. Cutting-edge research on the syntheses, characterizations, properties, and applications of a wide range of materials are covered for broad readership; from physical sciences to life sciences.

A design device study, based on algorithmic encodings of structure-property relationships, is used to identify new materials with panchromatic optical absorption. 9431 dyes are mined from the literature and optimally paired together to afford sensitizing dyes with complementary optical absorption properties. Promising combinations are experimentally verified in dye-sensitized ...

For most researchers there is no reason to opt out of this process. However, researchers planning promotional activity, like a press release, either with us or their institution, may wish to opt out to maintain the traditional embargo period for journalists.

Allotropy or allotropism (from Greek, Modern ἀλλοτρία, ἁλλοτρία, (allos), meaning 'other', and τροπή, (tropos), meaning 'manner, form') is the property of some chemical elements to exist in two or more different forms, in the same physical state, known as allotropes of these elements. Allotropes are different structural modifications of an element; the atoms of the element are bonded together in ...

A metamaterial (from the Greek word μετα, meta, meaning "beyond") is a material engineered to have a property that is not found in naturally occurring materials. They are made from assemblies of multiple elements fashioned from composite materials such as metals or plastics. The materials are usually arranged in repeating patterns, at scales that are smaller than the wavelengths of the ...
