International Journal of Engineering and Mathematical Intelligence, Vol. 1 Nos. 1 & 3, 2010 82 APPLICATION OF MINIMUM CURVATURE METHOD TO WELLPATH CALCULATIONS

APPLICATION OF MINIMUM CURVATURE METHOD TO WELLPATH

Provides detailed reference material for using SAS/STAT software to perform statistical analyses, including analysis of variance, regression, categorical data analysis, multivariate analysis, survival analysis, psychometric analysis, cluster analysis, nonparametric analysis, mixed-models analysis, and survey data analysis, with numerous examples in addition to syntax and usage information.

SAS/STAT(R) 9.22 User's Guide

Approximate Bayesian computation (ABC) constitutes a class of computational methods rooted in Bayesian statistics that can be used to estimate the posterior distributions of model parameters. In all model-based statistical inference, the likelihood function is of central importance, since it expresses the probability of the observed data under a particular statistical model, and thus ...

About 68% of values drawn from a normal distribution are within one standard deviation $\hat{\sigma}$ away from the mean; about 95% of the values lie within two standard deviations; and about 99.7% are within three standard deviations. This fact is known as the 68-95-99.7 (empirical) rule, or the 3-sigma rule.. More precisely, the probability that a normal deviate lies in the range between $\hat{\mu} - \hat{\sigma}$ and $\hat{\mu} + \hat{\sigma}$ is ...

The purpose of this page is to provide resources in the rapidly growing area of computer-based statistical data analysis. This site provides a web-enhanced course on various topics in statistical data analysis, including SPSS and SAS program listings and introductory routines. Topics include questionnaire design and

survey sampling, forecasting techniques, computational tools and demonstrations.

5.5.1 Pre-Processing Options. As previously mentioned, train can pre-process the data in various ways prior to model fitting. The function preProcess is automatically used. This function can be used for centering and scaling, imputation (see details below), applying the spatial sign transformation and feature extraction via principal component analysis or independent component analysis.
