Radiation therapy and cell death. Radiation therapy can kill cancer cells by a variety of mechanisms. The main goal of radiation therapy is to deprive cancer cells of their multiplication potential and eventually kill the cancer cells.

Cancer and Radiation Therapy: Current Advances and Future

The book provides an overview of the current knowledge on cellulolytic enzymes and their applications. It summarizes the mechanisms of synthesis and hydrolysis of cellulolytic enzymes, industrial fungal strains, genetic engineering of fungal strains and application of cellulolytic enzymes.

Neo-adjuvant therapy for resectable NSCLC has been a topic of active debate over the years. Because of modest pathologic responses and a failure to demonstrate overall survival improvements, many have argued against it.

Journal of Thoracic Oncology Home Page - jto.org

Radiation therapy or radiotherapy, often abbreviated RT, RTx, or XRT, is therapy using ionizing radiation, generally as part of cancer treatment to control or kill malignant cells and normally delivered by a linear accelerator. Radiation therapy may be curative in a number of types of cancer if they are localized to one area of the body. It may also be used as part of adjuvant therapy, to ...

Most doctors would categorize endoscopic third ventriculostomy as a failure in cases in which a patient shows no change in clinical symptoms or ventricular size or ...

Fact Sheet: Endoscopic Third Ventriculostomy

x Radiation-induced erectile dysfunction (RI-ED) following prostate cancer radiation therapy is a significant survivorship problem. The etiology of this condition has been postulated to result from injury to the penile vessels, nerves or both. To address this gap in knowledge, we applied a vascular radioprotectant to a rat model of RI-ED.

Management of Glioblastoma in the Elderly - Hematology

A glioma is a type of tumor that starts in the glial cells of the brain or the spine. Gliomas comprise about 30 per cent of all brain tumors and central nervous system tumors, and 80 per cent of all malignant brain tumors.

Glioma - Wikipedia

Introduction. Glioblastoma (GBM) is the most common primary brain cancer in the age group after 40 years and the prognosis gets worse as the age increases. The land mark trial by Stupp et al. led to acceptance that maximal safe surgery followed by adjuvant chemoradiotherapy and adjuvant chemotherapy to be the standard of care .But local infield recurrence is an inevitable event, with most ...

Trigeminal neuralgia (TN or TGN) is a chronic pain disorder that affects the trigeminal nerve. There are two main types: typical and atypical trigeminal neuralgia. The typical form results in episodes of severe, sudden, shock-like pain in one side of the face that lasts for seconds to a few minutes. Groups of these episodes can occur over a few hours. The atypical form results in a constant ...

Pancreatic cancer occurs when cancer cells form and grow within the pancreas. These tumors are hard to diagnose early, since pancreatic cancer signs and symptoms aren't obvious. Because of this, the majority of these cancers are diagnosed after the disease has reached an advanced stage, when ...

Pancreatic Cancer | Symptoms, Diagnosis & Treatment | MD

Introduction. Prostate radiation therapy (RT) techniques have undergone a metamorphosis during the past 2 decades. We have transitioned from 2-dimensional to 3-dimensional (3D) techniques and, subsequently, to intensity modulated RT, image-guided RT (IGRT), and, more recently, to stereotactic body RT (SBRT).

Magnetic Resonance Imaging-Guided Adaptive Radiation

Many advances in the treatment of cancer have been driven by the development of targeted therapies that inhibit oncogenic signaling pathways and tumor-associated angiogenesis, as well as by the recent development of therapies that activate a patient's immune system to unleash antitumor immunity. Some targeted therapies can have effects on host immune responses, in addition to their effects on ...
