Neural Network Learning by the Levenberg-Marquardt Algorithm with Bayesian Regularization (part 2)

Neural Network Learning by the Levenberg-Marquardt

Rprop, short for resilient backpropagation, is a learning heuristic for supervised learning in feedforward artificial neural networks. This is a first-order optimization algorithm. This algorithm was created by Martin Riedmiller and Heinrich Braun in 1992. Similarly to the Manhattan update rule, Rprop takes into account only the sign of the partial derivative over all patterns (not the magnitude ...

Distance Protection Scheme For Protection of Long

Gradient descent is a first-order iterative optimization algorithm for finding the minimum of a function. To find a local minimum of a function using gradient descent, one takes steps proportional to the negative of the gradient (or approximate gradient) of the function at the current point. If, instead, one takes steps proportional to the positive of the gradient, one approaches a local ...

Hi, I've been trying to make work your matlab code with a rotated image by 30 degree (only rotation no translation). I use a SIFT algorithm to detect common feature points in both images and then I apply your script (with those points as the input points) to try to get the applied rotation (30deg) and I get that a translation has been applied as well.

Finding optimal rotation and translation between

If you are upgrading from a previous version, visit our Top Features page to see what's new in the latest version, or browse our Key Features by Version page.. Browse the sections below to learn more about Origin

and OriginPro. Features available only in OriginPro are marked as PRO.

Origin: Data Analysis and Graphing Software

Camera Calibration and 3D Reconstruction. The functions in this section use a so-called pinhole camera model. In this model, a scene view is formed by projecting 3D points into the image plane using a perspective transformation.

Hi Yoel. I am very grateful for your feedback. It is very exciting for me to know about real-world applications using my work. Noise robust differentiators without time delay (one-sided or forward filters):
